

1st ENTRY

Predefined level - ALERT-ALGO - Execute. MIND XXXXXXXXXX

2nd STEP -

SL(STOP LOSE) SYSTEM..... - No Compromise....

1SL CLOSE LAPTOP! Don't Even Check Charts.

3rd STEP -

3.1 - TARGET HIT - EXIT. No Trading After

3.2 - TARGET HIT - STILL OPEN (AFTER MORE EXPERIENCE ABOUT 3 MONTHS AFTER)

THERE ARE THREE TYPES OF TRADING

1. Breakout or Breakdown Trading

2. ReTest Trading

3. Reversal

- 1. Breakout or Breakdown Trading
- 2. Breakout Trading : When stock breaks out the resistance level. (We will enter in this type of market if stock consolidates for some time). We will not enter in drastic breakout.
- 3. Breakdown trading : same for break down trading where stock breaks the support level. (Enter if stock consolidates horizontally or vertically). We will not enter in drastic breakdown.

(NOTE: In Break-Out or Break-Down trading, suppose stock takes support and start upward journey, it creates two green candles and we thought to buy at this level. But always check the day high and low on that moment then an only trade on it. If it does not breaking day high and low then let it retest it for some time).

- 1. ReTest Trading : (ReTest comes into the picture when stock breaks out the resistance or support level)

When stock breakout the resistance or support level. We will wait for it to retest. If it retest then enter into the market.

- 1. Reversal :

When stock touches to the resistance level but don't breakout and again start downward journey then it is reversal trading. Same for support level where stock touches the support level and instead of breakout it, it will again pulls up and start upward journey then it is also reversal trading.

**Super bullish candle** : The candle which has high wig at bottom and high body with green candle. Opposite for red candle.

Three type of market chart

**T-1 (Bulling Flag)**

Corrective(Pullback) Wave

Impulsive(Trending) Wave

Impulsive(Trending) Wave

**T-2 (Bulling With consolidating)**

C2\*

C1\*

Impulsive

Consolidate

Impulsive

Corrective

C1\* : 60% changes of market goes up

C2\* : 40% changes of market goes down

NOTE : (Mostly goes up)

**T-3 (Impulsive only)**

Happens 10% times in the Market, (Rarely happen)

**NOTE : Never trade into this type of market**

**TRENDLINE**

**[NOTE: ALWAYS PREFER TO DRAW THE LINE ON CLOSING CANDLE]**

When stock breaks out the trendline, there are two possibilities:

1. It will reverse the trend (means change the direction of the trend).
2. It will consolidate

**[NOTE : It will definitely retest once]**

[When stock breaks the trendline, it will definitely comes back to trendline, but at this time, it will take trendline as resistance and will start downward journey]

[Trendline is not a wood stick, that it will gets the stock down or up as touching the line, it is just showing the trend of the market, when trading with trendline, always prefer with the conjunction of horizontal line and sometimes retest]

**TRADE WITH TRENDLINE = TRENDLINE + HORIZONTAL LINE + RETEST**

**BREAKOUT SECRETS (Day or Hourly Time FRAME)**

1. Volume
2. Power Candle
3. Time Consolidation
4. Multiple TEST

**Box Breakout Strategy**

15 min Time Frame

Body to Body Connect

Common Sense

Wick

**BYE THE STRENGTH, SELL THE WEAKNESS**

**NOTE :- Want to find the Bullish Stocks then try to find the stocks which are at multilevel support.**
